**Location:** Berket El Sab, Menofia, Egypt

## Professional Summary

---

Software Engineer & Frappe/ERPNext Developer with an Accounting background. Specialized in building scalable backend systems, developing RESTful APIs with Python/FastAPI, and integrating e-commerce platforms with ERP solutions. Expert at translating complex accounting cycles into clean, maintainable code. Focused on high-quality, well-documented development.

## Technical Projects

---

### 1. Telegram Notification Manager — Frappe App

- **Dynamic Notification Engine:** Built a Frappe app that allows users to configure Telegram notifications per DocType and event. When an event fires, a hook triggers and sends a message — fully dynamic with condition-based filtering, Jinja-templated messages, and support for custom variables.
- **Inline Keyboard Actions:** Supports configurable inline Telegram keyboard buttons (e.g., Submit / Cancel) that trigger document actions directly from Telegram when clicked.
- **GitHub:** [github.com/Marwan-badr543/Telegram-Notification-Frappe-app](https://github.com/Marwan-badr543/Telegram-Notification-Frappe-app)

### 2. Support Management — Frappe App

- **ERPNext Issue Customization:** Extended the ERPNext Issue DocType with three dedicated support stages: Customer Service, Technician, and Maintenance Technician — each with its own workflow and responsibilities.
- **Maintenance Visit Management:** Manages scheduling and tracking of field maintenance visits to customers, linking tickets through the full support lifecycle from initial contact to resolution.
- **GitHub:** [github.com/Marwan-badr543/support\\_management\\_frappe\\_app](https://github.com/Marwan-badr543/support_management_frappe_app)

### 3. Full E-commerce site. (In development)

- Built a robust corporate administrative core designed to automate end-to-end business workflows.
- Designed the system architecture to handle real-time data synchronization between customer-facing retail operations and back-office accounting/operational modules.

### 4. Integrated E-Commerce Platform with ERPNext

- **Platform & Integrations:** Full customer ordering platform integrated with ERPNext, automating Sales Orders, Invoices, and Delivery Notes in real time. Includes Telegram alerts, Google Sheets sync, delivery slot scheduling, and an analytics admin dashboard.
- **Live Website:** <https://order.showsatellite.net/>

## 5. Real-Time Synchronization Engine: ERPNext ↔ OpenCart

- **Sync Engine:** Python/REST API bridge connecting ERPNext and OpenCart with real-time, automated sync of products, prices, stock, categories, and images — eliminating manual inventory management effort.
- **Demo Video:** [https://youtu.be/dLG\\_WjKm\\_7c?si=7coLFH4dW\\_84tdTX](https://youtu.be/dLG_WjKm_7c?si=7coLFH4dW_84tdTX)

## 6. "Fast Account 2" — Sales & Accounting Desktop Application

- **Cashier & Sales System:** Full cashier interface supporting cash/card payments, dine-in, takeaway, and delivery orders with automatic tax and service charge calculations.
- **Reporting, Inventory & HR:** Income statements, shift reports, smart inventory with ingredient-level cost tracking, low-stock alerts, and a complete payroll module with attendance and salary automation.
- **Technical Highlights:** Arabic/English bilingual UI (RTL/LTR), role-based permissions, and a robust database handling thousands of transactions.
- **Demo Video Playlist:** <https://youtube.com/playlist?list=PL3KODZISjp1S4kRxaW0lyQ4OqbGWUECch>

## Technical Skills

---

- **Frappe Framework & ERPNext:** Custom app development, DocType design, hooks, server scripts, client scripts, and REST API integration with ERPNext.
- **Backend Development:** Building robust backend systems and desktop applications using Python.
- **API Design & Integration:** Designing and developing RESTful APIs to connect platforms and automate data exchange using FastAPI.
- **Database Management:** Working with relational databases, designing efficient data schemas to ensure accuracy and performance.
- **ERP Customization:** Experience customizing and integrating ERP systems (ERPNext/Frappe) with external APIs and third-party services.
- **Tools & Technologies:** FastAPI, REST APIs, SQLAlchemy, Git.
- **Odoo Background:** Prior hands-on experience with Odoo development.

## Accounting Skills

---

- **Full Accounting Cycle:** Proficient in preparing journal entries, posting to general ledgers, and performing bank reconciliations.
- **Financial Reporting:** Capable of preparing financial statements including Income Statements and Balance Sheets.
- **Accounts Management:** Managing supplier accounts, customer accounts, and expense claims.
- **Inventory Control:** Managing warehouse inventory and linking it to accounting and financial operations.
- **Standards & Language:** Practicing accounting work in English in accordance with accepted accounting principles.

## Education

---

### Bachelor of Commerce — Accounting (English Section)

Menofia University | Grade: Very Good | Graduated: 2025

## Training & Courses

---

- Web Development with FastAPI
- Database Management with SQLAlchemy
- Frappe Framework Development
- Odoo Development (prior background)
- Odoo Functional Usage — Accounting & Purchasing
- Prompt Engineering
- Professional Financial Accountant (PFA)

## Languages

---

- Arabic: Native
- English: Very Good

## Military Status

---

- Permanently Exempted
